

LexisNexis® Streamline

– High Level Product Overview

Built on an industry standard Microsoft® platform

Familiar toolset includes Windows Workflow Foundation, Windows Communication Foundation, .NET 3.0, VisualStudio, Microsoft Office and Microsoft SharePoint

Empower your firm's existing resources

Interfaces with all incumbent technologies

Provides process automation between systems

Delivers relevant, contextualised information regardless where the original data resides

No need to replicate or create new data – **Streamline** extracts data from multiple systems and presents it to users in a consistent format

Familiar environment for internal developers

Increase efficiencies

Single management console makes projects easy to maintain

User interface delivered through any technology supported by Visual Studio, for example Outlook

Familiar, browser-based UIs

Windows Workflow Foundation pre-configured for law firms, enabling developers to build customised applications that meet user needs

No need to manually maintain integration layers

Consistent workflows

High quality, consistent, firm-wide workflows

Streamline combines an integration layer, workflow engine, document assembly engine and pre-built application components

Embodies firms to automate best practice with workflow technology

Rules-based approach allows for easy tracking and reporting with full internal and external visibility

SQL database security model for enforcing policy and personalising business practice

Multiple security layers enable full control with confidence
