

## LexisNexis® Enterprise Solutions Consultancy

### LexisNexis® Enterprise Solutions

The Enterprise Solutions consulting team offers a comprehensive range of services that can be designed to fulfill specific requirements and delivered in a variety of engagement formats.

---

#### Solution Requirements Capture

The capture of solutions requirements is key to the success of any project. This service involves a consultant, usually attending a client site, working with the client representatives and stakeholders to identify and document the:

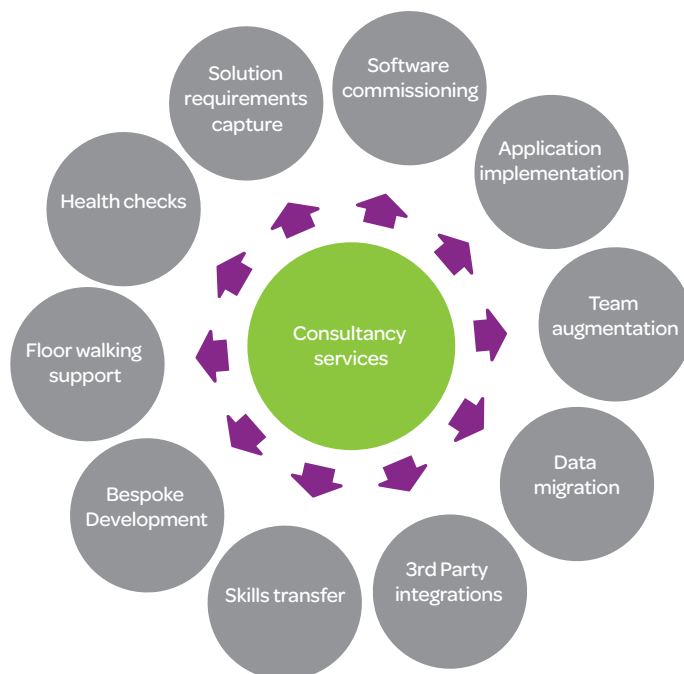

- Functional and non-functional solution requirements
- Technical solution specification
- Organisational change specification

---

#### Software Commissioning

LexisNexis will install and fully integrate their software products into the client's environment.

Consultancy services are provided for new installations, upgrades and re-installations into new environments. The service includes physical architecture design, software installations, client specific configurations and certification of the core product into the deployed environment.

#### Application Implementation

LexisNexis consultants bring their expertise in relating your requirements to the configuration and tailoring of LexisNexis applications.

Our consultants have a broad range of skills and expertise, which allows an agile approach to the formation of a team to match the right experience with the needs of your solution.

## Team Augmentation

The Enterprise Solutions consultancy team can provide application specialists and development expertise on site to work as a member of the clients' team - on projects for which the client takes responsibility for the management and delivery.

---

## Data Migration

We offer a service to define, develop and deploy tools that migrate client data from a legacy system into any one of our products. We can provide migrations from third party products to our core product set, and from our older software systems to our new systems.

We will utilise LexisNexis developed accelerators for the data formatting and documentation that allows the maximum re-use of code to speed up the migration process.

---

## Third Party Integrations

LexisNexis solutions can be integrated to third party applications through a number of supported and pre-defined interfaces.

The Enterprise Solutions consulting team can provide advice and guidance with regard to the best practice integration and configuration of these interfaces.

---

## Skills transfer

Client education support can be delivered in a more flexible format to a mutually agreed agenda. The consultancy is based on a hands on approach where our consultants will work with you to provide a solution determined by your individual needs. Typical examples of this are: design and development of reports, and deep technical education on application functionality.

## Floor Walking/Support

There are points in the project lifecycle where the client will greatly benefit from on-site consultancy support to assist them with issues that arise as the system is tested, deployed and optimised.

The consultant can fill the role of coordinator between the client and LexisNexis resources. This approach minimises project risk and assists in ensuring that 'business as usual' can be provided.

---

## Bespoke Development

LexisNexis can design, develop and deliver bespoke software solutions to fulfil your business requirements.

This service will be delivered to a mutually defined and agreed specification and in line with the LexisNexis delivery methodology.

---

## Health Checks

LexisNexis consultants conduct reviews of both application and system usage, providing recommendations for service improvements and advice and guidance on best practice techniques.

---

**These options can be discussed with your Account Manager or one of our Consulting Managers to establish which are most appropriate.**
