

# Lexis® Visualfiles™ Accelerator: Data8 Postcode Integration

Lexis® Visualfiles™

## Save time and avoid errors when entering addresses in Visualfiles

The Visualfiles Data8 Postcode Integration Accelerator brings Data8's online PostcodeLookup™ address validation service into Visualfiles.

It enables your lawyers and support staff to work more efficiently by capturing and automatically validating addresses in Visualfiles, making it possible for them to work faster and with greater accuracy than they could when entering addresses manually.

### Cut address capture time by 90%

By quickly pulling up addresses through a simple postcode search, the Data8 Postcode Integration Accelerator enables you to:

- Stay competitive on price by streamlining and automating data entry – essential for high-volume, low-margin legal work such as conveyancing, personal injury and debt recovery.
- Improve staff productivity by giving those who need to frequently capture address details an easy-to-use solution.

### Avoid reputation-damaging mistakes

Capturing the wrong address details carries a risk of damage to your firm's reputation. For example, if your firm sends information to the wrong address it could breach client confidentiality. The Data8 Postcode Integration Accelerator helps you to:

- Capture the right address and reduce the risk of data breaches.
- Avoid incurring additional work to fix mistakes.
- Ensure personal data is accurate (as required by Article 5 of the GDPR).

### Install quickly. Extend easily.

The Data8 Postcode Integration Accelerator lets you:

- Get up and running with postcode lookups in your chosen Visualfiles application within one day - with installation carried out for you by LexisNexis Enterprise Solutions.
- Easily extend the Accelerator to any additional applications yourself. You will be trained how to configure new screens in Visualfiles - in less than an hour per application.

### Maintain full control over usage

You retain complete control of how you use the Data8 Postcode Integration Accelerator in your organisation. For example, you can restrict use of the postcode lookup functionality to a specific application, a specific team or even specific individuals within a team.

### Access up-to-date addresses

The Data8 Postcode Integration Accelerator draws on the authoritative Royal Mail Postcode Address File, ensuring you have access to a constantly updated data source for UK residential and business addresses.
